

M. Ahmad Malik

Full-Stack AI Engineer | React & Next.js | LLM Integration

ahmadmalik1376@gmail.com | Rawalpindi, Pakistan | [portfolio-ahmadmalik-v698.vercel.app](#) | [LinkedIn](#) | [GitHub](#)

PROFILE

- Full-Stack AI Engineer shipping production web applications and LLM-powered systems in React, Next.js and TypeScript on the front, Node.js and Python/FastAPI behind them.
- Built and deployed AI features including LLM integration, computer vision and browser automation, turning complex AI capabilities into interfaces people can actually use.
- Strong background in scalable API design and database architecture (PostgreSQL, MongoDB, Oracle), with a focus on clean, modular, production-ready code.

WORK EXPERIENCE

Full Stack AI Engineer Jul 2026 – Present

Anma Tech (anmapk.com) — Remote, 6-month paid internship

- Sole developer on an assigned AI-powered product, owning the frontend, the backend and the AI/LLM integration layer end to end.
- Hold full ownership of architecture, API design and deployment decisions from planning through shipping, with no team support.

Website Development Intern Jan 2026 – Apr 2026

Growstep Technologies — Pakistan

- Built React.js interfaces for client websites, delivering assigned work on schedule within a professional team.
- Worked to Agile methodology: sprints, code review and team-based development workflows.

UI/UX Designer Nov 2025 – Present

Freelance — Remote

- Design user-centred interfaces and interactive prototypes in Figma for web and mobile applications.
- Create wireframes, mockups and design systems that prioritise usability, accessibility and modern aesthetics.

Freelance Full-Stack Developer 2023 – Present

Self-employed — Remote

- Built and delivered full-stack web applications for individual clients — management systems, dashboards and portfolio sites.
- Took each project end to end: requirements, database design, frontend, backend, deployment and documentation.

PROJECTS

Folium — Collaborative Document Editor Jul 2026 – Present

Next.js, TypeScript, FastAPI, PostgreSQL, Supabase, y-sweet, TipTap

- Built a Next.js/TypeScript frontend on a FastAPI and PostgreSQL backend, with authentication through Supabase.
- Implemented live collaborative editing with shared cursors over y-sweet, falling back to single-user autosave where collaboration is not configured.
- Added version history that snapshots while you type, with preview and restore.
- Documents stored as structured JSON, with permission-level sharing, soft delete and file import/export.

AI-Powered Bid & Proposal Response Engine 2026

Claude API, RAG (TF-IDF), Python, DOCX export

- Built an end-to-end engine automating RFP and tender responses — a process that typically consumes 60–80% of bid preparation time.
- Used the Claude API to extract requirements, evaluation criteria and deadlines from uploaded PDF and DOCX tender documents.
- Engineered a RAG-based matching system (TF-IDF) scoring requirements against a capability library with PASS/GAP/FAIL compliance checks.
- Built a win dashboard with a GO/NO-GO decision and probability score, plus AI-generated proposal drafts in 60 seconds with DOCX export.

FocusFlow — Student Productivity Management System

Feb 2026 – Present

React.js, Node.js, Express.js, Oracle 21c XE, JWT

- Built a platform combining task management, academic scheduling, attendance tracking and automated email notification.
- Engineered a real-time attendance engine with database triggers and a midnight cron job for absence tracking.
- Designed a fully normalised Oracle database of 17 tables with stored procedures, triggers and a materialised view.
- Built a RESTful API of 30+ endpoints across 7 modules, with 5 background cron services.

GraphForge — Client-Side Data Visualisation Platform

May 2026 – Present

React.js, D3.js, Recharts, Chart.js, SheetJS, jsPDF

- Architected a modular single-page application of 92+ files offering 69+ chart types across 5 analytical categories.
- Built a dual export system (PNG/SVG/PDF and CSV/JSON/Excel) that runs entirely in the browser, so no user data ever leaves the device.
- Kept the codebase at zero ESLint warnings using a registry-pattern architecture built to scale.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Vite
- **Backend:** Node.js, Express.js, FastAPI, Python, RESTful APIs, JWT authentication
- **Databases:** PostgreSQL, MongoDB, Oracle 21c XE, Firebase, SQL
- **AI & LLM:** Anthropic Claude API, LLM integration, RAG, prompt engineering, computer vision, multi-modal AI
- **Cloud & DevOps:** Google Cloud Platform, AWS, Docker, Git/GitHub, Vercel, Netlify
- **Automation & Testing:** Playwright, browser automation, web scraping, accessibility testing (ARIA)
- **Languages:** Python, TypeScript, JavaScript, Java, C++, SQL

EDUCATION

Bachelor of Science in Computer Science

Dec 2023 – Expected Mar 2028

Iqra University, Islamabad (H-9)

ACHIEVEMENTS

- Agentic AI Hackathon — Atom Camp, June 2026
- CUST Hackathon 2026 — national hackathon
- GitHub Open Source Collaboration workshop — Iqra University, Islamabad
- Website Development internship certificate — Growstep Technologies
